- Undergarment Removal**
- Vomit Decontamination**
- Crisis Intervention Team Appeasement Offering** extra bonus points - Creamy Dark
- Phenylhydrobenzamine and 5% remanative tetryliodohexamine treatment**

Maintenance Details

The toxilator was removed and inspected. Readings indicate the Hell Cycler was subjected to users in a state of extreme inebriation. These reading were the highest since the Hell Cycler was immersed in a Jim Beam bath during CE testing. Although at that time, the readings were only 72% of those recorded following the Bar to Bar ride.

The spamshaft linkage was partially restricted due to one item of superhero type spandex tights interfering with the action of the spiral decommutator. Adjusted and returned to service.

That, and the sensor gain pot was tweaked to get the cup mode dispense cycle working again.
